
Before You Buy A Lift.

Concrete Floor:

Most two post and four post lifts require four inches of concrete with 3,000 lb. PSI strength.

Door width and height:

Some lifts are pre-assembled before delivery. Make sure your workshop doors are high and wide enough before delivery.

Ceiling Height:

Check the ceiling height of your area to make sure it is adequate for installation of your new lift.

Delivery:

Can a truck get to your unloading area?

Electrical:

Please review the voltage requirements of your lift. Please make sure your building has the correct power source.

Payment:

Debit cards have a daily limit. If you intend on placing your order using a debit card, please make sure that your debit card has a high enough daily limit to allow a successful banking transaction. Most banks that issue debit cards will increase your daily limit for a specific transaction.
